

Polycom[®] RealPresence[™] Experience High Definition (RPX[™] HD)

Features and Benefits

January 15, 2007

End User Benefits

Feature	Benefit
High Definition Video	High definition video on large format displays gives a real-life, true-dimension for participants in an immersive room meeting, giving the feeling of truly being in the same room.
High Definition Audio	High definition audio is supported in StereoSurround by Polycom sound system and ceiling microphones allowing an effortless communication environment where participants speak in a normal tone of voice anywhere in the suite.
High Resolution Content	Direct VGA connection allows users to present content at a moment's notice by simply plugging a VGA cable into a laptop.
Multi-purpose Room	The suite is useful even when not being used for video communications. It can be used as a training room, conference room, board room, or the highest quality RealPresence conferencing environment
Seamless Video Displays	Large format, seamless video display walls allow for viewing of continues video across (8) or (16) feet of video displays for a truly cinematic experience.
Interoperability	The Polycom RPX HD Suites are completely interoperable with all standards based video conferencing products meaning that the end user can maximize their capital investment and continue to use legacy video solutions.
Transparent Technology	With the cameras hidden behind the displays, the microphones suspended from the ceiling cloud, sound system out of view and no remote controls on the table, the technology is hidden and the meeting participants can focus on the business at hand.
All Inclusive Environment	The all inclusive environment means that the product ships complete with everything required for a dramatic RealPresence Experience with no additive equipment or room treatments.
Room Mobility	This room-within-a-room design is constructed such that, if an organization moves to a new facility or re-allocates space in the existing facility, the suite can easily be disassembled and moved to a new location, leaving the original room intact.

Flexibility of Design

The choices of design for the suites in terms of room configurations (6 unique floor plans) and finishing treatments (wood finish, carpet color and chair fabric) means that the user gets the room that's right for the application in a design that's uniform across the organization.

Organizational Benefits

Feature	Benefit
Ease of Use	Executives, Boards of Directors and subject matter experts use their time in meetings more effectively because their focus is on the discussion at hand, not the technology.
Reliable Technology	Productivity is increased because workers spend more time working and less time traveling.
Consistent Performance	Business relationships develop and become more solid through continual, face-to-face telepresence communications.
Data Collaboration	Sharing ideas across distances is enhanced through content sharing and collaboration in conjunction with a real-life video presence.
Financial Return on Investment	Limited financial and human resources that were spent on travel can be channeled into more productive efforts that will promote the value of the organization.
Accepted Technology	Video communications has become an acceptable, productive means to connect with dispersed team members and actually encourages more frequent collaboration.
Functional Technology	Project teams experience accelerated decision making and reduced time to market with new products.
Managed Services	The quality of life for an organization's most valuable resource, its people, is preserved and results in greater employee retention.
